

CAUTION: Always be sure to back up your site (or make a copy if you use something like WP Twin-You can see my review of it on my blog [Here](#)) prior to making ANY changes, including adding new plugins.

Below is a list of recommended plugins for your wordpress sites. You may pick and choose which ones are appropriate for your particular type of site. There are two ways to find and install plugins.

- 1) Go to your dashboard and click on Appearances then plugins on the dropdown list. Then click add new and then you can put the plugin name in the search bar and see if the plugin comes up then click to install and then activate once it is installed.
- 2) Click the link to the site below and download the plugin to your computer then go to your dashboard and click on appearances, then plugins, then add new and then click the upload link and go to where you downloaded the plugin. Then install, then activate.
